Summary

I have been dedicated to the craft of software development for over three years, and I have leveraged the Python, Node, PHP, and Java stack and JavaScript frameworks like JQuery, React, and AngularJS, etc in my role as a full-stack developer for previous clients. I also have a passion for mobile development, I have built couple of apps using Java and Android. I am passionate about solving problems and building/architecting scalable solutions for the web. With all my years of experience in software development, I love to mentor others. When I'm not working or mentoring, I watch football.

Employment History

Software Engineer

Andela • Lagos, Lagos

07/2017 - 04/2020

- Created or implemented an API using NodeJs and Postgress Sql to build a chatting and group chatting application names PostIt.
- Created a frontend for the PostIt application using ReactJs that consume the API above.
- Also created an API for Todolist application named Worklist for creating todo and subtasks. I used Nodejs and MongoDB(Nosql) database
- Also consume the Worklist API using ReactJs to build
- I was also a part of a team that built an in house learning system at Andela. Is an application where mentee can request for mentors. I work on Laravel(PHP) at the server side. one of the feature I work on is admins can view filter and update request from mentee. I also work on the fronend using AngularJs

Software Engineer

SITE123

04/2019 - 08/2019

- Implemented dynamic social links for website creators. I implemented the feature that enable users add social links to their website.
- Add gift card module to website creators on SITE123. I design the interface that will enable users add gift card to their website. Admin can set giftcard prices and their clients can use the gift card to purchase products
- Create re-wrote the script that allows users purchase domains from our platform.

Software Engineer

Showclix • Pitsburg, Pennsylvania

06/2018 - 02/2020

- Implement ETL-ingestion migration process. I work on migrating data from a partner company into Showclix platform. I was involved in the process of the migration and implemented using google protobuf files using PHP.
- Design a protobuf schema that is used for exporting and ingesting protobuf files.
- Implemented an ingestion script in PHP that recieves protobuf files and ingest it into Showclix platform.
- Work on export script that can read data and convert protobuf files.

- Build and implement NodeJs Endpoints for sending and receiving protobuf files
